APPLICATION EXAMPLE

What can be wrapped?

Save money!
protect the environment

Eco-friendly material, containing up to 55% of chalk which reduces the amount of petroleum-based polymers and the detrimental effect on the natural environment.

UP TO 55% CALCIUM
MAGNESIUM CARBONATE

EASY TO RECYCLE

Why choose FRESH film?

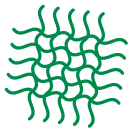

Eco-friendly

After use, the material is recyclable and safe for the environment.

Proven

The packed product stays fresh longer. The packaging has certificates and is approved for contact with food

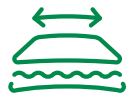

Does not delaminate

In increased humidity conditions, the material does not stick to the product.

Grease-resistant

The packaging material is an ideal barrier to grease and water.

Good shape-memory

It keeps its shape and is resistant to punctures and tears.

UV protection

It protects products against the adverse influence of UV radiation.
